**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims rejected under 35 U.S.C. 102(b) as being anticipated by Charrat (U.S. Patent No. 5,774,459).

Regarding claims 1-4, Charrat discloses a method for accessing a reverse channel for communication from a remote unit to a base station, comprising: waiting a random period of time in response to determining that the reverse channel is available at a first time [col. 4, lines 9-10]; monitoring a forward channel after expiration of the random period of time to determine whether the reverse channel is available at a second time and transmitting to the base station a first portion of data on the reverse channel, the first portion of data being transmitted in response to determining that the reverse channel is available at the second time [col. 4, lines 11-13].

Regarding claims 5-7, Charrat discloses transmitting from the remote unit to the base station a second portion of the data on the reverse channel, the second portion of the data being transmitted in response to a determination that the remote unit has accessed the reverse channel [col. 4, lines 32-35].

Regarding claim 8, Charrat discloses a step of performing an access failure algorithm in response to determining that the remote unit has not accessed the reverse channel [col. 4, lines 14-17].

Art Unit: 2681

Regarding claims 9-11, 14-15, Charrat discloses a method for accessing a reverse channel for providing communication between a remote unit and a base station, comprising: executing a channel access method to access the reverse channel; waiting a random time in response to the channel access method failing to provide access to the reverse channel; and re-executing the channel access method in response to a determination that the reverse channel is not available after passage of the random time [col. 4, lines 14-17].

***Allowable Subject Matter***

3. Claims 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Park et al. (U.S. Patent No. 6,188,910) teach method for connecting mobile stations to base station in radio communication system.
